```

6. ModerationQueue, очередь модерации отзывов:

```
_id: ObjectId('69aa22c6caf7ef7c13857394')
review_id: "rev_003"
user_id: "user_144"
product_id: "prod_401"
review_text: "Отличный товар!"
rating: 5
moderation_status: "pending"
▼ flags: Array (1)
  0: "contains_links"
submitted_at: "2026-02-19T06:50:02.369Z"
```

PostgreSQL (init.sql)

Создана БД service с таблицами:

Users — профили пользователей

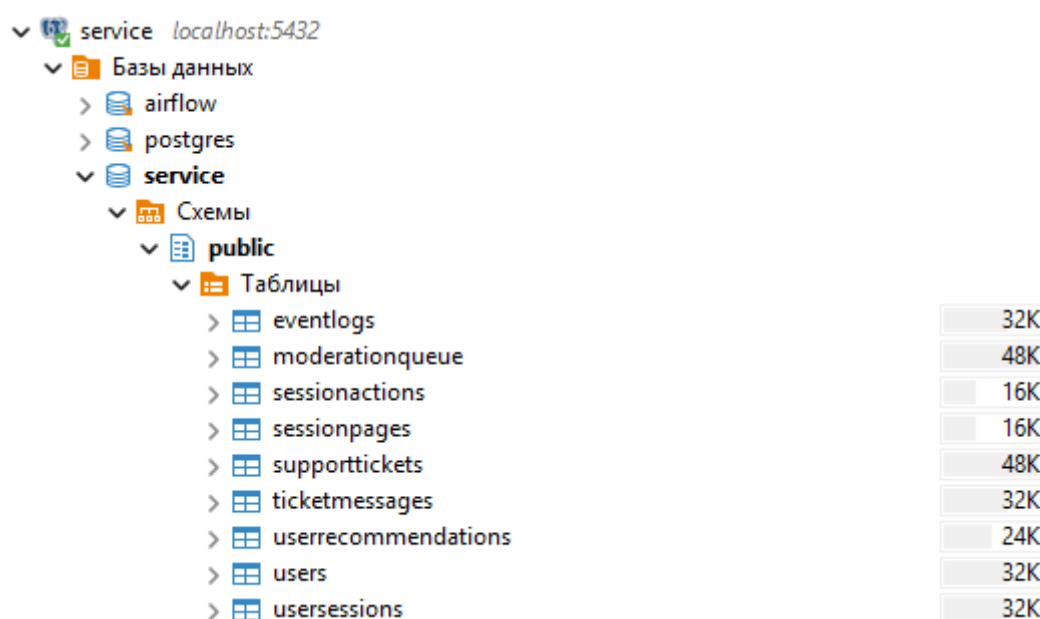

UserSessions, SessionPages, SessionActions — сессии пользователей

EventLogs — логи событий

SupportTickets, TicketMessages — обращения в поддержку

UserRecommendations — рекомендации пользователям

ModerationQueue — очередь модерации отзывов

Репликация данных

ETL-пайплайн для переноса данных из MongoDB в PostgreSQL (airflow/dags/etl_revina.py) содержит 6 задач для выгрузки, трансформации и загрузки коллекций: Users, UserSessions, EventLogs, SupportTickets, UserRecommendations, ModerationQueue.

На этапе выгрузки данные извлекаются из MongoDB с фильтрацией по дате для инкрементальной загрузки (при каждом запуске задачи выполняется запрос к целевой таблице для получения наибольшего значения created_at,

после чего из MongoDB извлекаются только те документы, у которых дата создания больше этого значения).

На этапе трансформации полученные документы преобразуются в pandas DataFrame, после чего выполняется очистка данных: приведение типов, удаление дубликатов, обработка пропущенных значений, нормализация вложенных структур (например, разворачивание массивов pages_visited, actions, messages в отдельные записи), преобразование словарей в JSON-строки и валидация некоторых данных.

Загрузка осуществляется в соответствующие таблицы PostgreSQL.

The screenshot displays the Databricks interface. On the left, a 'Duration' chart shows the execution time for various tasks. The tasks listed are: etl_users, etl_user_sessions, etl_event_logs, etl_support_tickets (highlighted in blue), etl_user_recommendations, and etl_moderation_queue. The chart shows that etl_support_tickets has the longest duration, around 00:00:57. On the right, the 'Details' tab is selected, showing a log for the task 'etl_support_tickets/attempt1.log'. The log content includes the following text:

```
af28bc75fa02

Аналитические витрины

Витрина 1. Активность пользователей — поведенческий анализ

(airflow/dags/user_activity.py)

Эта витрина должна определять, как пользователи взаимодействуют с сервисом — количество сессий, время на сайте, посещённые страницы и виды действий.

Цели:

- анализ активности пользователей по времени
- определение наиболее популярных страниц и действий

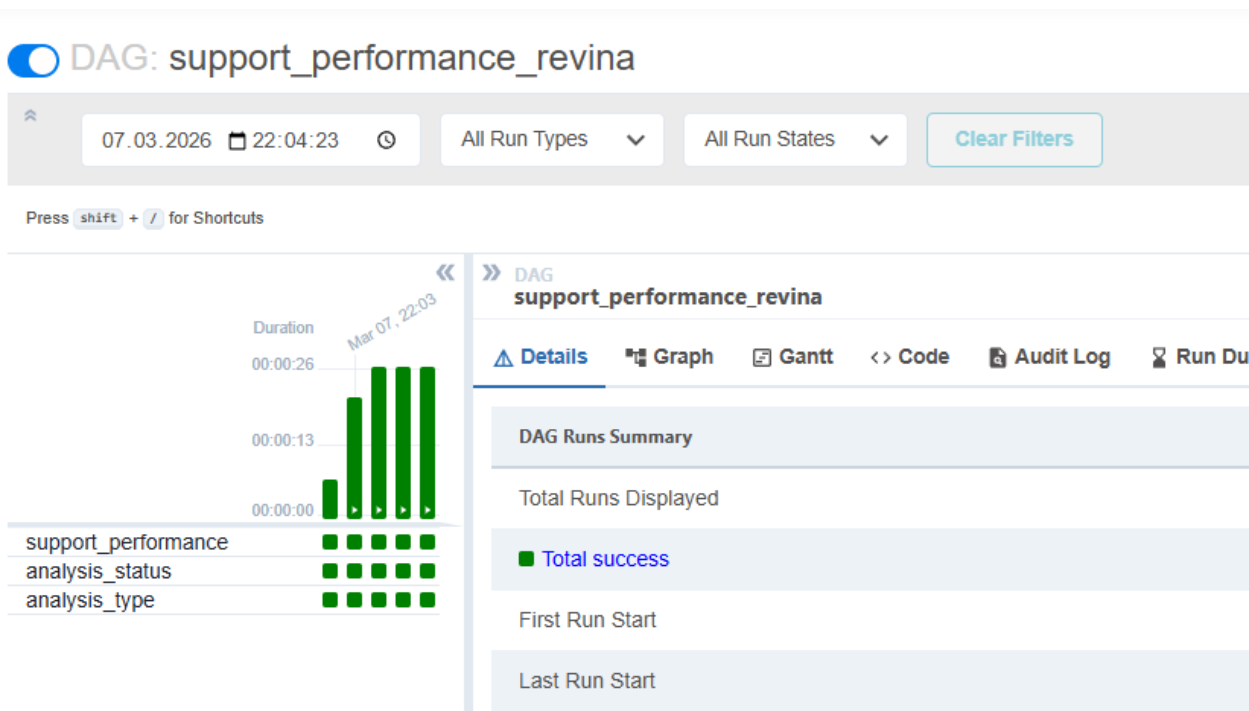

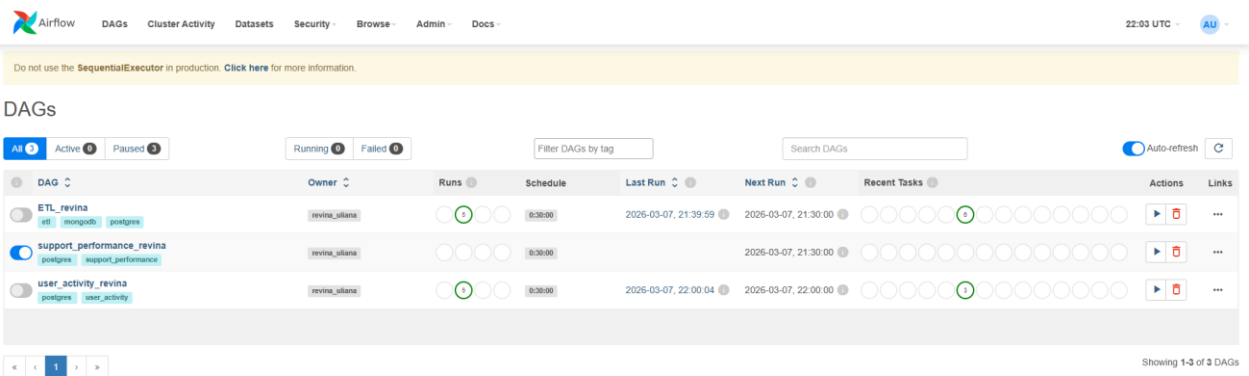

Airflow DAGs Cluster Activity Datasets Security - Browse - Admin - Docs										
Do not use the SequentialExecutor in production. Click here for more information.										
DAGs										
All Active Paused Running Failed Filter DAGs by tag Search DAGs Auto-refresh										
DAG	Owner	Runs	Schedule	Last Run	Next Run	Recent Tasks	Actions	Links		
ETL_revina	revina_silana	1	0:30:00	2026-03-07, 21:39:59	2026-03-07, 21:30:00					
support_performance_revina	revina_silana		0:30:00		2026-03-07, 21:00:00					
user_activity_revina	revina_silana		0:30:00		2026-03-07, 21:00:00					

Витрина 2. Эффективность работы поддержки — статистика по обращениям
(airflow/dags/support_performance.py)

Эта витрина должна отслеживать статус обращений, тип проблем и их актуальность.

Цели:

- подсчёт количества тикетов по статусам и типам
- время решения (от создания до обновления)
- анализ текущих открытых тикетов
